Smrcek, K. and Barton, K.
CORROSION STUDIES. IV. ELECTROCHEMICAL AND CORROSION KINETIC STUDIES OF ZINC IN WATER. 7 Oct 59 [22]p. 18 refs.
Order from SLA $2.60 61-16773

Trans. of [Sbornik Chekhoslovatskykh Khimicheskykh Rabot] 1956, v. 21, p. 339-348.

DESCRIPTORS: *Zinc, *Corrosion, Electrochemistry, Corrosion research, Water.

The electrochemical and corrosion kinetic behavior of zinc in water of different kinds was investigated between 20° and 95°C. An increase of potential of Zn was observed at 80°C in the tap water, feed water and distilled water, which can be explained by the change in the characteristics of the corrosion products and by the change in the depolarization mechanism of the cathodic places. In the synthetic water the potential increase has not been observed. Different reaction mechanisms (Metallurgy--Corrosion, TT, v. 6, no. 5) (over)
